What are slash chords?

Slash chords, also called chords over bass notes, are chords with different bass notes than usual. They are frequently used as transitional chords, but not always. Most of the time the bass note (the lowest pitched note in the chord) is also the root note of the chord. For example, the lowest note in a G chord is a G.

Slash chords feature a different note as the bass note. For example, G/B is a G chord, but played with a B as the lowest pitched note.
